USE OF BARDEN MODEL FOR CONSOLIDATION OF SRI LANKAN PEATY SOILS

PROJECT REPORT SUBMITTED IN PARTIAL FULFILMENT OF THE REQUIREMENT OF

M. Engineering in Geotechnical Engineering

University of Moratuwa, Sri Lanka.

ACKNOWLEDGEMENT

It is a great pleasure to express my gratitude and acknowledgement to my project supervisor Prof. B.L Tennakoon, for his guidance and constant encouragement to make this project a success.

Also I would like to express my highest appreciation to Dr. U.G.A Puswewala, Project Co-ordinator not only for the proper co-ordination but also for the guidance and assistance provided to run the computer programme.

It is my pleasure to take this opportunity to thank Dr. Athula Kulathilake, for the assistance and encouragement extended throughout the study period.

Also I am thankful to Mr. D.L.C Welikala, Director – Geotechnical Engineering Division –NBRO for granting permission to use data from the laboratory tests.

The assistance given by Mr. Chandima Ahangama, Ms. Tamara Wicramasinghe and the staff of Environmental Division of NBRO for carrying out laboratory tests is highly appreciated.

Special thanks are also due to my colleagues who assisted and encouraged me to reach the goal.

CONTENTS

1.0 INTRODUCTION

1.1 Definition of peaty soils

1.2 Engineering problems associated with peat and need for ground improvement

1.3 Engineering parameters for peaty soils

1.4 Determination of consolidation characteristics

1.5 Objectives of the study

2.0 THEORETICAL MODEL OF BARDEN AND METHODS ADOPTED FOR DETERMINATION OF MODEL CONSTANTS

3.0 DETAILES OF STUDY AREA TOGETHER WITH FIELD INSTRUMENTATION

University of Moratuwa, Sri Lanka.
Electronic Theses & Dissertations

3.1 Peat and its occurrence in Sri Lanka

3.2 Study area with methods of field instrumentation adopted

3.3 Typical sub surface profiles of study area

3.4 Filling details in main study area

4.0 DETAILS OF LABORATORY INVESTIGATIONS

5.0 RESULTS AND ANALYSIS OF LABORATORY TESTS

5.1 Natural Moisture Content, Organic Content, Specific Gravity and Dry Density

5.2 Analysis of consolidation test results with respect to Terzaghi model

5.3 Analysis of consolidation test results with respect to Barden model

5.4 Study of the Barden model constants with other measured soil parameters

6.0 PREDICTION OF FIELD SETTLEMENTS

6.1 Area selected for field prediction

6.2 Predictions using the Barden model

6.3 Predictions using the Terzaghi model

6.4 Conclusions

7.0 CONCLUSIONS

8.0 RECOMMENDATIONS FOR FUTURE WORKS

9.0 REFERENCES

ANNEXURES

Annexure 1 e-log p curves

Annexure 2 Barden programme and the computer output

Annexure 3 Specimen calculations – C_v and t/T_s

Annexure 4 Terzaghi programme and the computer output

University of Moratuwa, Sri Lanka.
