## ABSTRACT

Electricity demand in Sri Lanka is mainly categorized into three main sectors as Domestic, Industrial and Commercial and the factors affecting on electricity demand may vary from sector to sector. Various methods have been developed to predict electricity demand for sector wise by many authors. The objective of this study is also model the sector wise electricity demand considering the quarterly data of Gross Domestic Product (GDP), Exchange Rate (USD) and Electricity Price (X1) ( 1994-2007) using Vector Error Correction analysis.

Dickey Fuller test confirmed that each series were non stationary. The Granger Causality test was applied to find the direction of causality between electricity demand ( $Y_t$ ) in each sector and GDP, USD and X1. Cointegration test is used to identify linear combination of the integrated series for which is the best define for long run equilibrium relationships between the variables. Three separate VEC models were identified for each sector. By using the plots of histogram, Autocorrelation Function (ACF) and Augmented Dickey Fuller Test (ADFT) confirmed and that the errors of each models as random. Further, it was found each model less than 5% Mean Absolute Percentage Error for the data used.

Three main factors are identified as the significant contribution to electricity demand in Sri Lanka. Gross Domestic Product is the most important factor for electricity demand for three sectors as GDP of lag1, 2 and 3 found as significant variables for three sectors. Exchange rate only affects for the Domestic and Commercial sectors electricity demand and they can be described using one, two and three lag values of USD. There is no affect from electricity price on commercial sector electricity demand. Domestic sector electricity demand depends on one, two and three lag values of electricity price and Industrial sector electricity demand depends on two and three lag values of electricity price. The results obtained this study is useful for the awareness on the impacts of different external variables and so to set up the effective business strategy in the changing business environment.

## ACKNOWLEDGMENT

Apart from my efforts, the success of this research depended largely on the encouragement and guidelines of many others. I take this opportunity to express my gratitude to those who have been instrumental in the successful completion of this research.

I would like to express my grateful thanks to Mr. T. M. J. A. Cooray, Senior lecturer of Mathematics, University of Moratuwa, for providing guidance and for his tremendous support and help. Without his encouragement, guidance and infinite experience this research would not have been a reality. I deeply appreciate his dedication and for sacrificing his valuable time to make my effort a success.

I also wish to express my appreciate to Mr. Rohana Dissanayake, Senior Lecturer, Department of Mathematics, University of Moratuwa for providing immense support and advise in completing this project successfully.

I express my sincere thanks to Mr. Bandula S. Thilakasena, Deputy General Manager (Regulatory Affairs), Electricity Board for providing the opportunity to receive information for the successful completion of this project.

I also would like to thank Mr. W. K. Wijeratne of the statistics division of the Electricity Board who provided data to make this project a success.

Finally, I would like to thank my parents and members of my family for the patience they had while I was on this project and for their guidance and blessings.

## Table of Contents

Declaration.....	i
Abstract.....	ii

## LIST OF ABBREVIATIONS

Abbreviation	Description
GDP	Gross Domestic Product
DW	Durbin Watson statistic
ACF	Autocorrelation Function
PACF	Partial Autocorrelation Function
ADFT	Augmented Dickey Fuller Test
GWh	Giga Watt hour
kWh	Kilo Watt hour
USD	United States Dollar
UK	United Kingdom
USA	United States of America
AIC	Akaike Information Criteria
SIC	Schwarz Information Criteria
JB	JarqueBera Statistic
OLS	Ordinary Least Square
VAR	Vector Auto Regression
VEC	Vector Error Correction
Mn	Million
