Telecommunication Engineering

# Abstract

**Senaratne, Damith Nivantha** (Master of Science in Telecommunications)

**Intuitive Reasoning for Epistemic Uncertainty** (December, 2007)

Abstract of a dissertation at the University of Moratuwa.

Dissertation supervised by Dr. E.C. Kulasekera

No. of pages (57)

---

Epistemic uncertainty, characterized by subjectiveness and partial availability of information, is associated with the domains of multi-sensor fusion, evidence processing, etc. Mathematical Theory of Evidence, pioneered by Glenn Shafer [1], is a branch of study seeking to analytically model and manipulate the epistemic uncertainty entertained by an agent.

The field is relatively young and cluttered with schemes that are used non-cohesively and often counter-intuitively. Further the issue is made worse as none of the schemes seems to be capable of modeling fully the uncertainty met in practice. Interestingly, humans are capable of intuitively handling such uncertainty in statements in their day-to-day activities. It is apparent that the reasons for deficiencies in existing models is the unjustified nature of their application approaches.

This research seeks to enhance the intuitiveness and flexibility in mathematical modeling of epistemic uncertainty. It identifies three aspects, which any model should address cautiously. Namely, the manner in which real world propositions are mathematically represented, the manner in which uncertainty entertained by an agent is conveyed as a number assignment, and the manner in which expressed uncertainty is combined and conditioned. Novel strategies that parallels the way humans reason and hence enhance the intuitiveness, are introduced to overcome shortcomings in the existing mathematical representation. Further it proposes representing support as functions of propositions which are formed using a Boolean algebra on a set of hypotheses representing the context. Handling of some complicated propositions is simplified

by introducing *N-of*, a logical operator formalizing the human notion 'N of n'. The research also proposes methods that can be used to select an appropriate combination strategy based on the contextual relationships between the frames, for a given evidence. It is further noted that the counter intuitive results obtained using the existing combination function's is a direct consequence of one being unaware of this relationship. Latter part of the research focuses on the concept of pre-conditioning, where evidence is conditioned based on external information one deems as certain. It also examines how comparable evidence may be averaged based on pre-determined weights.

Although, a couple of novel concepts are introduced, the concepts retains backward compatibility with what is already established in this domain. Being modular, the proposed schemes can be selectively integrated with the existing techniques.

# Acknowledgment

Completing a full-time research is not just an individual achievement. Therefore I wish to take this opportunity to thank all stakeholders associated with this research.

First of all, thanks go to Dr. E.C. Kulasekere, the research supervisor, without whose insight, guidance, feedback and especially the constructive criticisms, this research might have gone astray. Next, my gratitude goes to Dr. A.A. Pasqual, the coordinator of M.Sc. Telecommunications program and Prof. J.A.K.S. Jayasinghe, for their feedback and volunteering to be members in the evaluation panel. I extend my sincere gratitude to all my lecturers at the university and teachers since my childhood for letting me reach where I am now.

Special thanks go to my parents & family without whose care and commitment, involvement in full-time research might have been unimaginable. Last, but not least, I wish to thank *ITU Youth Education Scheme Scholarship 2006-2007* and *NOKIA Corporation, Finland* that financed the masters program at the University of Moratuwa.

# Contents

List of Figures	vii
List of Tables	viii
Notations	ix
<b>CHAPTER 1 Introduction</b>	<b>1</b>
1.1 Motivation . . . . .	1
1.2 Uncertainty . . . . .	2
1.2.1 Aleatory Uncertainty . . . . .	2
1.2.2 Epistemic Uncertainty . . . . .	3
1.2.3 Need of Differential Treatment . . . . .	3
1.3 Theory of Belief . . . . .	4
1.4 Summary of Goals . . . . .	5
1.5 Organization of the Presentation . . . . .	5
<b>CHAPTER 2 Preliminary Investigations</b>	<b>7</b>
2.1 Literature Survey . . . . .	7
2.2 Key Aspects . . . . .	7
2.3 Problem Categorization . . . . .	9
<b>CHAPTER 3 Representation of Belief</b>	<b>10</b>
3.1 Preliminaries . . . . .	10
3.1.1 Shafer Model . . . . .	10
3.1.2 Transferable Belief Model . . . . .	13
3.1.3 Dezert-Smarandache Theory . . . . .	14
3.1.4 Other Models . . . . .	14
3.2 Intuitiveness . . . . .	14
3.3 A New Approach . . . . .	16

3.3.1	Definitions . . . . .	16
3.3.2	N-of notation . . . . .	20
3.3.3	Mathematical Framework . . . . .	24
3.3.4	Implications . . . . .	30
<b>CHAPTER 4 Combination of Evidence</b>		<b>31</b>
4.1	Preliminaries . . . . .	31
4.1.1	Dempster's Rule of Combination . . . . .	31
4.1.2	Transferable Belief Model . . . . .	32
4.1.3	Murphy's Rule of Combination . . . . .	33
4.1.4	Dezert-Smarandache Rule of Combination . . . . .	33
4.1.5	Other Combination Rules . . . . .	34
4.2	Intuitiveness . . . . .	35
4.3	A New Approach to Evidence Combination . . . . .	36
4.3.1	Definitions . . . . .	36
4.3.2	Hypothesis-level Inter-frame Relationship . . . . .	37
4.3.3	Frame-level inter-frame Relationship . . . . .	39
4.3.4	Transformation . . . . .	41
4.3.5	Inferencing Inter-Frame Relationships . . . . .	42
4.3.6	Selection of Combination Rules . . . . .	47
<b>CHAPTER 5 Preconditioning Evidence</b>		<b>51</b>
5.1	Preliminaries . . . . .	51
5.2	Averaging . . . . .	52
5.2.1	Conventional Approaches . . . . .	52
5.2.2	A New Approach . . . . .	53
<b>CHAPTER 6 Conclusion and Future research</b>		<b>56</b>
6.1	Representation of Belief . . . . .	56
6.2	Combination of Evidence . . . . .	56
6.3	Preconditioning Evidence . . . . .	57
<b>Bibliography</b>		<b>58</b>
<b>APPENDIX A Proofs</b>		<b>I</b>
A.1	Representation of Belief . . . . .	I
A.2	Preconditioning Evidence . . . . .	XIV

## List of Figures

4.1	Dependency Graph (for example 27) . . . . .	46
4.2	Dependency Trees (for example 27) . . . . .	46
4.3	Dependency Trees - Cropped (for example 27) . . . . .	46
