Thesis submitted in partial fulfillment of the requirements for the
Degree of Master of Science in Project Management

Department of Building Economics

University of Moratuwa
Sri Lanka

March 2016

Declaration

I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to produce and distribute my thesis, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

Acknowledgement

I would like to express here, my genuine appreciation of all those who helped me complete this thesis.

I am indebted to my research supervisor Dr. (Ms) Thanuja Ramachandra for her honest guidance, support, encouragement and the confidence she placed in me, throughout this research thesis.

A big “thank you” is conveyed to the Head of the Department of Building Economics Dr. (Mrs.) Yasangika Sadanayake for her interest, valuable direction and helpful comments.

To all the academic staff of the Department of Building Economics, I convey my heartfelt thanks, in recognition of their knowledge contribution throughout the M.Sc. programme.

Further, I sincerely thank to Ms L.A. Siriwardana (Programme Administrator/ Technical Officer), Mr. A. Srithayanandarajah (Technical Officer) and all other non-academic staff of the Department of Building Economics for their helpful support.

My deep appreciation also goes to the Project Director, Greater Ratnapura Water Supply Project and its staff, the Head of Corporate Planning Division of NWSDB and its staff, and the AGM – Billing Section of NWSDB, for their obliging collaboration and efforts of data collection in the preparation of this thesis.

Finally, I owe my deepest gratitude to my office colleagues, friends, my family and those who inspired me towards the completion of this thesis.

Abstract

The Development of Performance Measures in the Management of Water Utilities in Sri Lanka

In developing countries, water utilities bear massive challenges, in supplying pipe-borne water. National Water Supply & Drainage Board (NWSDB), the sole supplier of safe drinking water in Sri Lanka, under the Ministry of City Planning & Water Supply, increased its piped water services to cover 34% of population in 2014. NWSDB's Corporate Planning Division presents its performance, showing access to safe drinking water, via Annual and Key Performance Indicator (KPI) Reports, using different ratios with eleven variables. Performance is imperative for the betterment of a water utility. Recognizing this fact, the study proposes an alternative way of presenting performance of NWSDB, because single ratios do not provide comprehensive explanations about performance of water utilities.

Therefore, this study focused on the productive efficiency concept under parametric approach to estimate technical efficiency using Stochastic Production Frontier (SPF) technique as the best Industry Practice. First, SPF model was proposed for NWSDB. Then, selected regional manager's centres producing pipe-borne water were analysed using SPF model, to check its inefficiency. The test statistics found that SPF model was an inefficiency model. Finally, NWSDB was analysed using SPF model and overall mean technical inefficiency and technical efficiency were estimated for the period of 2010, 2011, 2012, 2013 and 2014. The SPF model was analysed using maximum likelihood iteration method to estimate the elasticity values of parameters, using the STATA software package, specially designed for stochastic frontier models.

Study confirmed NWSDB manages a similar technical efficiency level annually. Technical efficiency trend showed the increase occurring at a diminishing rate. Finally, the inefficiency model derived from the SPF model was proposed to NWSDB, which clarified the significance of variables affecting NWSDB's production, directly or indirectly, to managers etc. This SPF model allowed NWSDB to estimate mean technical efficiency for presenting performance reports as an alternative.

Table of Contents

Declaration	i
Acknowledgement	ii
Abstract	iii
Table of Contents	iv
List of Tables.....	vi
List of Figures	vii
List of Abbreviations	viii
CHAPTER 1- INTRODUCTION	1
1.1. Background.....	1
1.2. Research Problem Identification.....	2
1.3. Aim and Objectives.....	5
1.4. Research Methodology.....	5
1.5. Scope and Limitations.....	6
1.6. Chapter Organization	7
CHAPTER 2 - LITERATURE REVIEW	8
2.1. Introduction	8
2.2. An Overview of the Sri Lankan Water Utility Sector.....	9
2.2.1. KPI and OPI.....	15
2.3. Definition of Efficiency.....	16
2.4. Review of Efficiency and Performance Measurement of Water Utilities.....	19
2.5. Input-Output Variables for Performance Measures in Water Utilities	29
2.6. Summary.....	35
CHAPTER 3 - RESEARCH METHODOLOGY	37
3.1. Introduction	37
3.2. The Possible Approaches to Efficiency Measurement in Water Utilities.....	37
3.2.1. The Flow of Construction Sequence of Frontier Functions.....	38

3.2.2. Non-Parametric Approach	39
3.2.3. Parametric Approach- Stochastic Cost Frontiers (SCF).....	40
3.2.4. Parametric Approach- Stochastic Production Frontiers (SPF)	42
3.3. The Specification of Methodology for NWSDB	45
3.3.1. The Model Proposed for NWSDB	51
3.3.2. Obtaining DATA for Analysis.....	53
3.3.3. Research Design as a Summary	55
3.4. Summary.....	56
CHAPTER 4 – DATA ANALYSIS AND FINDINGS	57
4.1. Introduction	57
4.2. Data Collection	57
4.2.1. Data Description.....	58
4.2.2. Sampling Technique.....	60
4.2.3. Data Collection Technique	61
4.3. Data Analysis and Findings	62
4.3.1. The Analysis of Model and Findings for selected Regions	62
4.3.2. Estimation of Overall Technical Efficiency for NWSDB and Findings ..	68
4.4. Summary.....	75
CAPTER 5 – CONCLUSIONS AND RECOMONDATIONS	76
5.1. Introduction	76
5.2. Key Research Findings and Conclusions	77
5.3. Recommendations.....	79
5.4. Further Research	80
