## DECLARATION

I hereby declare that the project work entitled “Mining Continuous Assessment Marks to Predict Final Results” submitted to the University of Moratuwa, Faculty of Information Technology, is a record of an original work done by me under the guidance of Mr. S. C. Premaratne, Senior Lecturer of Department of Information Technology, University of Moratuwa and this project work is submitted in the partial fulfillment of the requirements for the award of the degree of Master of Information Technology. The results embodied in this thesis have not been submitted to any other University or Institute for the award of any degree or Diploma.

Date: March 15, 2016

## **ACKNOWLEDGEMENT**

I would like mostly thank to Mr. S. C. Premaratne for his boundless and instructive help for making this research project success. Without his supervision, guidance and expert knowledge in data mining, this research would have not been possible.

I would like to thank Mr. Fordhous for guiding me to decide the scope of the project and collect necessary data.

Further I would like to thank Ms. Thilini for assisting me by providing necessary students data which was very important for this research project.

Next I would like to thank the staff members of Faculty of Information Technology for motivating and assisting me to do this course of study in numerous ways.

I take this opportunity to extend my gratitude to thank many of the colleagues and friends who have provided help, advice and companionship during my M.Sc. research study.

Finally I thank my parents for their encouragement and patience during research period.

## ABSTRACT

Educational Data Mining is used to study the data available in the Universities, Higher Educational Institutes and other educational fields and extract the knowledge from it. As a result of reducing the cost of processing data and storing data, data storage became more easy and cheaper. Education Institutions are facing important and fast growth of the volume of educational data.

Data mining also called as Knowledge Discovery in Database (KDD) and search for inter relationships and patterns that can find, but already hidden among the vast volume of educational data.

Classification methods like decision trees, rule mining, Bayesian network etc can be applied on the educational data for predicting the students performance in examinations. This prediction will help the lecturers, teachers, tutors and students themselves to identify students' performance in the end semester examination. It will help the intelligent students to motivate more to maintain higher standard of marks and motivate weak students score better marks.

The J48 decision tree algorithm is applied on students' internal assessment marks to predict the grade they would gain at the end semester examination. In order do more accurate prediction some personal attributes like gender, their academic district, Advanced level Stream had been considered. With this research, students' who are likely to get higher grade or lower grade will be predicted more accurately. Predicted results can be distributed among teachers and tutors and necessary steps can be taken to improve the performance of the students who will be predicted to get lower grade or fail.

# Table of Contents

- Chapter 1 ..... 1
  - Introduction..... 1
  - 1.1 Introduction..... 1
  - 1.2 Background and Motivation ..... 2
  - 1.3 Problem Definition ..... 2
  - 1.4 Objectives of the Project ..... 2
  - 1.5 Structure of the Thesis ..... 3
  - 1.6 Summary..... 3
- Chapter 2 ..... 4
  - Literature Review ..... 4
  - 2.1 Introduction..... 4
  - 2.2 Data Mining Concept ..... 4
  - 2.3 Educational Data Mining ..... 4
  - 2.4 Data Mining Techniques ..... 4
  - 2.5 Data Mining Tools..... 5
  - 2.6 Related Work..... 6
  - 2.7 Summary..... 6
- Chapter 3 ..... 7
  - Analysis and Technology Adapted towards Prediction ..... 7
  - 3.1 Introduction..... 7
  - 3.2 Selection of inputs for the system..... 7
  - 3.3 Process..... 8
  - 3.4 Data Mining Techniques used in this Project ..... 8
  - 3.5 Expected Output..... 9
  - 3.6 Data Analysis Process ..... 9
    - 3.6.1 Data understanding and Pre-Process ..... 9
    - 3.6.2 Visualizing Data..... 10
    - 3.6.3 Creating Model for Data Analysis ..... 10
    - 3.6.4 Apply the Model for Data Analysis ..... 10
    - 3.6.5 Validate the Model ..... 11
  - 3.7 Calculating the Accuracy ..... 14
  - 3.8 Summary..... 14
- Chapter 4 ..... 15
  - Development Approach ..... 15

4.1	Introduction.....	15
4.2	Application of Model and Validation.....	15
4.2.1	Prediction of Results Based on One Attribute – Subject3 .....	15
4.2.2	Summary of Prediction using one Attribute –Subject 3 .....	18
4.2.3	Prediction of Results Based on Two Attributes – Subject 3 .....	18
4.2.4.	Summary of Prediction Using Two Attributes-Subject3.....	21
4.2.5	Prediction with three attributes – Subject3 .....	22
4.2.6	Application of Model – Subject3 .....	22
4.2.7	Validation of Model – Subject3 .....	23
4.2.8	Calculating the Accuracy – Subject3.....	24
4.2.9.	Prediction of Results based on One Attribute – Subject 2 .....	24
4.2.10	Prediction of Results based on Two Attributes – IN 1310.....	31
4.2.11	Summary of Correctly classified rate for single attribute (Subject 2 B12 & B13) .....	33
4.2.12	Summary of Correctly classified rate for two attributes (Subject 2 B12 & B13) .....	33
4.2.13	Summary of Correctly classified rate for two attributes (Subject 2 B12 + B13).....	34
4.2.14	Application of Model Subject 2( B12 + B13).....	34
4.2.15	Validation of Model Subject 2( B12 + B13).....	35
4.2.16	Calculating Accuracy subject 2( B12 + B13).....	35
4.2.17	Prediction of Results based on one attribute - subject 1 .....	36
4.2.18	Prediction of Results based on two attributes - subject 1.....	37
4.2.19	Prediction of Results based on three attributes - subject 1 .....	37
4.3	Gender → Results Analysis.....	38
4.4	Summary.....	39
Chapter 5	.....	40
Design	.....	40
5.1	Introduction.....	40
5.2	Introducing Changes to Rules .....	40
5.2	Summary.....	44
Chapter 6	.....	45
Implementation	.....	45
6.1	Introduction.....	45
6.2	Proposed System .....	45
6.2.1	Inputs for the proposed system .....	45
6.2.2	Process.....	45
6.2.3	Output of the proposed system .....	45

6.3	Prerequisites for the proposed system .....	45
6.4	Proposed System Implementation .....	46
6.4	Results Prediction Process.....	47
6.5	Testing .....	51
6.6	Summery.....	52
Chapter 7	.....	53
	Conclusion and Further Work.....	53
7.1	Introduction.....	53
7.2	Conclusion .....	53
7.3	Further work.....	54
References	.....	55
Appendix A	.....	57
