

**"BUILDING MASS AS THE MODIFICATION FACTOR
IN ACHIEVING THERMAL COMFORT
OF URBAN CANYONS, IN COLOMBO REGION"**

A Dissertation presented to the
Faculty of Architecture
University of Moratuwa
Sri Lanka
For the
M.Sc. (Architecture) Examination

K.A.C.M. Gunawardena

2007

89485

Declaration

I declare that this dissertation represents my own work, except where due acknowledgement is made, and that it has not been previously included in a thesis, dissertation or submitted to this University or to any other institution for a degree, diploma or other qualification.

(Principle Supervisor)

Senior Lecturer

Department of Architecture,

Faculty of Town & Country Planning,

University of Moratuwa,

Sri Lanka.

Acknowledgement

First and foremost, my deepest gratitude is to my supervisor Dr. Upendra Rajapakshe, Department of Architecture, Faculty of Architecture, University of Moratuwa for offering me the opportunity to undertake this study and his invaluable guidance, supervision and generous help given throughout this study.

I am extremely grateful to Dr. Harsha Munasingha, Archt. Jayanath Silva and Miss.Arosha (Year Masters and Lecturer).

Prof. R. Emmanuel and all other members of the Department of Architecture, Faculty of Architecture, University Moratuwa for direct and indirect encouragement, which have been a great help for this study.

University of Moratuwa, Sri Lanka.
Electronic Theses & Dissertations

I am very much thankful to Kaushal and Suranga, all who have extended their fullest support in enormous ways to make this dissertation a success.

I express my thanks to Mr.Chathura and Dilanka malli for his kind cooperation for the research.

Special thanks to Archt. Upuli, my sister and brother Nisansala and Dinesh aiya. Finally to Lakmini is for being my shadow.

Content

1.1	Introduction	01
1.1.1	Justification	01
1.1.2	Scope of study	03
1.1.3	Methodology	03
1.2	The urban canyon	04
1.2.1	Definition of Urban Canyon	04
1.2.2	Classification and Geometry of the urban canyon	06
1.3	Public life and urban canyon	08
1.3.1	Accessibility	08
1.3.2	Public gathering	09
1.3.3	Publicness	09
1.3.4	Comfort	10
1.3.5	Livability	10
2.1	Tropical urban canyon for out door comfort	13
2.1.1	Dry-bulb and Wet-bulb Temperature	13
2.1.2	Relative Humidity	14
2.1.3	The Temperature-Humidity index (THI)	15
2.2	Thermal comfort in tropical urban outdoors	16
2.2.1	Psychological	17
2.2.2	Thermo physiological	17
2.2.3	Heat balance differences	18
2.3	Urbanization & climate	20
2.3.1	Urban Heat Islands	22
2.3.2	Urbanization in the city of Colombo	23

3.0 Climatic effects on urban canyon	26
3.1 Climatic behaviors in tropics	27
3.1.1 Climatic Behavior in Warm Humid climate	27
3.1.2 Micro climatic behavior in Colombo region	30
3.2 Factors effecting on environment of a city	31
3.2.1 Solar Orientation and Radiation	31
3.2.2 Urban Wind movement	42
3.2.3 Effect from Vegetation	47
3.2.4 Materials of Surrounded built environment	50
4.0 Methodologies	52
4:1 Site selection and Characteristics of the selected site	52
4:2 Method of study	55
4.3 Site analyzing	56
4.3.1 Front Street (North –South) axis	56
4.3.2 First Cross Street (North –South) axis	59
4.3.3 Second Rohini Lane (East-West) axis	62
4.3.4 Prince Street (East-West) axis	65
Summery	68
Conclusion	69
Bibliography	72
