ACKNOWLEDGEMENT

I wish to express my sincere thanks to all the graduate engineers who participated in the survey resulting in nearly 50% returns of the circulated questionnaires. Without their committed support in answering 40 questions by spending their valuable time, this project would not have been successful. Next my thanks go the undergraduates who participated in the survey on undergraduates and to the lecturers who undertook to carry out the survey spending their valuable time.

I appreciate the acceptance of my project proposal positively and for all the encouragement and guidance given to me by Dr. Ranjit Perera, the supervisor of this project. Without his positive approach and suggestions, this project would not have been implemented or completed. I thank him for all the help.

I cannot forget the encouragements given by professor Rohan Lucas , at all encounters reminding the project work and necessity of completing it in time. I thank him for all the help and encouragements.

The task of handling nearly 28000 data items is not an easy task. I sincerely thank Kumudu and Chandana who entered all the data into the database.

I thank Lanka Transformers Ltd, and Mr. UD Jayawardana, the General Manager for giving me this opportunity by sponsoring and granting leave for following the Master of Engineering program.

Finally I thank my wife, Samudrika for helping to coordinate the undergraduate survey at the university and giving all the support and encouragements.
