Thesis submitted in partial fulfilment of the requirements for the degree  
Master of Science in Financial Mathematics

Department of Mathematics

University of Moratuwa  
Sri Lanka

December 2021

## Declaration

I declare that this is my own work, and this dissertation does not incorporate without acknowledgement any material previously submitted for a degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

Signature: ***UOM Verified Signature*** Date: 14/03/2022.....

P. Tilagadivani

The above candidate has carried out research for the master's dissertation under my supervision.

.... ***UOM Verified Signature*** Date: 14/03/2022.....

A.R. Dissanayake

Senior Lecturer

Department of Mathematics

Faculty of Engineering

University of Moratuwa

## **Acknowledgements**

This study has been given an opportunity to develop research skills, decision making, and personal skills developments. Attaining our goals in this study would not be possible without acquiring proper guidance, assistance, and encouragements from number of people, who have experience in specific fields. On that basis, my supervisor Mr. Rohana Dissanayake, Senior Lecture in Mathematics, Department of Mathematics, University of Moratuwa, gave all the supports and encouragements to finish my works effectively. Thus, I wish to express my grateful thanks to my supervisor.

My grateful thanks are further extended to the course coordinator Mr.T.M.J. A Cooray, Senior Lecturer, Department of Mathematics, University of Moratuwa, for the valuable guidance and advice throughout this Postgraduate degree program.

In addition, I wish to thank all my colleagues who helped me to continue the studies from start to end in the post-graduate programme, and other staff and technical assistants in our department, who gave all the assistance constantly throughout my studies.

## **Abstract**

Investment decisions include higher level of risk due to the uncertainty nature in the business environment. Thus, investors take investment decisions more wisely by considering several internal and external factors. As a result, this study is mainly focusing on the profitable industries in a developed country like United Kingdom and it has considered analysing for the top 10 companies listed in the share market. Further, it investigates how changes in the financial performance of those selected companies influencing the profit of first 10 best. Thus, Multinational National Companies (MNC) in the UK during the period of 2005 to 2019 was selected as the sample of this study. Accordingly, eight performance indicators were used to carry out this study as current ratio, Quick ratio, Debt to equity ratio, Return on Asset ratio, earning per share ratio, Return on Investment ratio, Return on Equity ratio and number of employees. Moreover, secondary data was collected through annual financial statements of the organizations. In this research Principal Component Analysis (PCA) tools have been used to analysis and discuss the profitability of performance indicators of the selected MNC. As per the analysed data, principal component analysis was run to come up with variables from each component. However, all the variables involved in this analysis are not recorded within the expected range as some showed higher level of deviations. Accordingly, this study demonstrates the position of the MNCs in the UK to different stakeholders who are interested in the financial performance of each company by giving them a quick analyse to show the performance of each company. It also assists those who do financial reporting on picking the ratios which matter in reflecting the performance of their companies. The use of PCA gives unbiased ratios that are most significant to assess the performance financially. As a result, this study will be beneficial for the future investors in financial market to select the best MNC to make them invest decisions based on the financial performances of the organizations. Moreover, this study suggests future research to use other alternative multivariate methods to reduce the complexity of the obtained model.

Keywords: Performance Indicators, Principal Component Analysis, Multi-National Companies and United Kingdom

## TABLE OF CONTENTS

Declaration	i
Acknowledgements	ii
Abstract	iii
TABLE OF CONTENTS	iv
LIST OF FIGURES	vi
LIST OF TABLES	vii
CHAPTER 01: INTRODUCTION	1
1.1 Introduction	1
1.2 Stock Market and Share Prices	2
1.3 Making sense of numbers	3
1.4 Sector - MNC companies	4
1.5 Research Aims and Objective	5
1.6 Significant of the study	5
1.7 Organisation of dissertation	5
CHAPTER 02: LITERATURE REVIEW	7
CHAPTER 03: METHODOLOGY	11
3.1 Introduction	11
3.2 Variables & Measurement	13
3.3 The models used in this Analysis such as Multivariate Model and Analysis	15
3.3.1 Methods and factors to predict and determine the choice of investment, stock market rise and falls of company stock value	16
3.4 Conceptual framework	16
3.4.1 Principal Component Analysis & Application	16
3.5 Data	17
3.5.1 Source	18
3.6 Empirical analysis	19
3.6.1 Model PCA	19
3.6.2 Eigen Value & Eigen Vector	21
3.6.3 Scree plot	21

3.6.4	Conduct PCA	22
3.7	Software	22
3.8	Kaiser -Meyer- Olkin (KMO)	22
3.9	Factor Analysis	23
CHAPTER 04: RESULT AND DISCUSSION		24
4.1	Introduction	24
4.1.1	GDP Growth	25
4.1.2	Descriptive Statistics	26
4.2	Principal Component Analysis (PCA)	28
4.3	PCA discussion	35
4.4	Factor Analysis	36
CHAPTER 05: CONCLUSION		40
References		42
Appendix I: Principal Component Analysis- Out put		45

## LIST OF FIGURES

Figure 3.1: Variables –Performance indicator	17
Figure 4.1: Multiple Scatter Plot for the factors of selected companies over the period from 2005 to 2019	27
Figure 4.2: Scree Plot: Graph 01	31
Figure 4.3: Cumulative Eigenvalues -Graph 2	31
Figure 4.4: PCA – Variable loading plots, Component score plots, Biplots( Scoring & Loading )	32

## LIST OF TABLES

Table 1.1: Annual Sector exposure	3
Table 1.2: UK top 10 largest Companies (March 2020)	4
Table 3.1: Top 58 countries - GDP per capita & Ranking	11
