ACKNOWLEDGEMENTS

The author wishes to express his sincere thanks to Mr. N. G. H. De Silva and Mrs. Nirmali Perera for the advice and guidance given during the course of this work.

He also wishes to thank Messrs G. Sathyamoorthi and Jacob Mathew for the assistance rendered to carry out the project at the Pugoda Mill Processing laboratory.

Lastly but not the least a special word of thanks goes to the Management of the Pugoda Mill for the suggestion of this project title.

ABSTRACT

This project has been undertaken to review and study the existing textile finishing processes in the Processing Department of the Pugoda Textile Mill, and to propose cost reductive modifications or new methods of practical importance.

The suggestions made here are practicable under the existing set up of processing machinery, while maintaining and even improving the present quality standard. It is concluded that there are a large number of possibilities of reducing costs by process modification and new methods.
